

CDS SOFTWARE INTEGRATION UPDATE

Macmillan is currently developing and rolling out integrated versions of the CDS tool within each GP IT system.

INPS VISION

We are pleased to announce that the integrated INPS Vision CDS tool is now available to **all Vision users across the UK**.

The tool sits within the consultation workflow and has three functions which are to provide risk indicator pop up alerts, data entry templates and practice reports using Willie Hamilton's RAT algorithm.

For more information on each of these functions and on how to access the tool please visit the [INPS Visionplus Help page](#).

TPP SYSTEMONE

Due to internal reorganisation at BMJ Informatica, the original CDS tool is **no longer available** as a free download for TPP SystemOne users.

We are currently working with TPP SystemOne to integrate the CDS tool into their system, so that it will be available free of charge to all SystemOne users. As we are in the early stages of development with SystemOne, we do not as yet have a release date confirmed. If you would like your details to be added to the TPP SystemOne mailing list, so that we can update you when the integrated version of the tool becomes available, please [email us](#).

If you are an existing BMJ Informatica customer, or would like to purchase a package to include the CDS tool before the integrated version becomes available, please [email us](#).

EMIS WEB

We are pleased to announce that **EMIS Web users** in England and Wales are now able to access an updated version of the **QCancer tool** in EMIS Web 5.9. This tool uses Julia Hippisley-Cox's QCancer algorithm.

The update includes risk score Prompts, the Symptom Checker template, an additional template to record QCancer Outcomes and Follow Up, and new Safety Netting searches. In this update, the alert triggering threshold has changed from a **5%** composite risk score, to a site-specific score of **2%** or above.

For further information on how to activate the prompt function or access the active symptom checker and follow up templates, please visit the [EMIS Health support centre](#) and login using your EMIS Web Credentials if based in England and your support Centre Credentials if based in Wales.
