

# CANCER IN SOUTH WEST GP FEDERATION

Diagnoses of and prostate cancer are significantly more common here than across all NI. The incidence rate is second highest of all GP Federations.

Cancer is as common in South West GPF as it is across all of NI.

Average cases 2011-15:

**543** South Belfast GPF

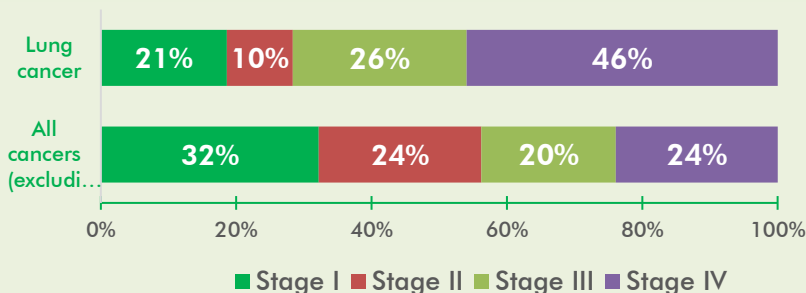

**9,073** Northern Ireland

Cancers diagnosed per 100,000 people

Late diagnosis is much more likely for lung cancer than other cancers.

Known stage at diagnosis for cancers in South West GPF (2011-15)

More than 1 in 4 cases of lung cancer (26%) were diagnosed at Stage I or II.

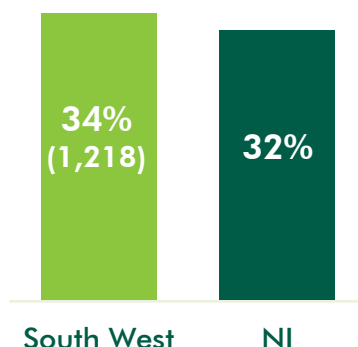

This is higher than the rate for all of Northern Ireland (22%).

3,609 people living with cancer up to 23 years at end of 2015 (58,586 NI).

**WE ARE MACMILLAN. CANCER SUPPORT**

Proportion at 1-5 years since diagnosis

23-year prevalence by age (South West GPF outer ring, NI inner)
